A 14 year old Labrador Retriever, weighing 2015, bus spiles an arevect 1,000 mg for the first and only time on 07 Jul 2017. The pot owner didn't specify if it was given with food. The dog was also vaccinated with Nobivac Leptod on the same duy. The dog was five multi end of August 2017, but then started losing fur and salvating more than usual. It also appears he lost mobility in his back legs (NeDRA coded as macufoxide/elda disorder NoS- not reported to be neurologic in nature). He was back to normal by No 2017. The pet owner reported this to the clinic this week (Dec 2017) and never had the dog examined by a ver for this condition. He returned an unused dose of Breverce to that he did not want to use on his dog because he felt the Brovecto was responsible for his dog's condition. He said he is concerned about what he is seeing on social media. The pattern has chronic allegies and indelenance to chicken, but is otherwise healthy, He has not received any other medication since Bravecto. The veterinarian does not feel Bravecto has anything to down this. No further information is expected. NOBIVAC L4 DE-NLINTVINT-2015-DE-00365	Germany	Anmal	Canine/dog	8 Week(s)	10/04/2015	06/05/2015	3 2	1 10/04/	015 Yeş,GBX-GBX-B R≻-GBX-GBX-Ye	s NOS,Shock,Found dead	No Data	Siap Adverse Reaction: On 10 Apr 2014 in the morning (9.45 am) three &-week-old pupples were vaccinated with Nobucs SFP and Nobbus C.A. At vaccination time all three were fir and well mourble Affer the vaccination at home two of the pupples (not clear which ones of the three) had been slightly strange (code as behavioural disorder). The animal owners had not been at home during the day and when they came home in the evening they found one of the pupples does and already stiff. One of the other pupples was they fail fixed, but, if the third pupp us completely on. Necropy results are pending. Follow-up expected. Follow-up from 06 and 11 May 15: It was clarified that the two pupples which had shown strange behaviour af fixt were the same ones which had been affected later - one was dead, one was wet (reason still wirknown). The third pupp was top fit the whole time. The two remaining pupples are both hoding fine. Necropy results of the dead pupp, were neceived on 11 May. Diagnoses: It 3 Shock (acute cardiovascular failure) 19:2 Streptococcus anjenous and Staphylococcus intermedius were found in the respiration ytarc without visible signs of disease. Comment of the pathologist: The main finding was a high-grade acute congestive hyperemia in the big parendymal organs (lung and livery with typical signs of acute shock (cardiovascular failure). This can be seen as reason for death. A causal relation between vaccination and reaction appears possible, although this can generally not be proven postmornally. Bacteriological findings can be seen as additional findings without clinical relevance. There was no evidence for differential diagnoses like manifest infectious diseases, intoxication or traums as reason for death. As accolated, Reason for use for product. Activity of the Control of	ASR- On 12 Jul 2016 at 3:30 pm. a dog was vaccinated with Nobleus CIPP and Nobleus C L4 (mixed yriving) and Nobleus C Telepartely), on erginge on each side (right /Hft), eact a pollication site unknown. On the next day after vaccination, the dog was slightly pathetic, ate slightly less and had pain when walking with slight ataxia. The dog was presented on 14 Jul 2016 at 10.56 a.m. in the practice in the following condition: temperature 40.3 °C, painful in all joints, it walked very badly walking difficulty, labout ests revealed lescopts as 11.950 (normal: between 6000-12000 / microlliter). A test for Borelliosis was initiated, but results are not available yet. The vet considered the reactions as vaccination side-effects of Nobleus. Additional information. Table of third of the dog in the dog's records is 27 Mar 2016, but it was estimated, that the dog must be at least 4 weeks older based on it's size and on effection changes. The vet will contact in in case of further relevant enformation, ontherwise case closed. Blood chack revealed marked anaemia, leucoryolas of 55 Gl (ref-61 2Qf), and hyphoprotosis. CD 34 marker was positive, therefore, the examining lisb suspected acute cytotosic T-cell fluxlemia or hyphophom stadlum 5. The 60g was transferred to a vet full, where it was decided to esthanize the dog due to poor prognosis. No postmortem was performed. The vet's assessment is 0 unclassified. Note: Approx 10 days prior vaccination the dog was treat with an artibiotic due to an inflammation of the control of the vet. Note: since acute cytotosic T-cell leuchemia or hyphopions stadium's were just suspected only positive. CD 34 marker was coded via abnormal test result. Case closed. [Reason for use for product. 		Germany	mital	Cannet GOS	2.5 Year(s)	02/03/2018	05/03/2018		0 02/03/201	B NO_GRR~GR~B	Lateral recumbency, Loss of consciousness, Anaphpaissi, Low blood pressure, Paile mucous membrane, Decreased heart rate, Vocalisation, Shallow breathing, Emeis, (multiple), Muscle weakness NOS, Tachypnoea	Outel	Saspected Adverse Reaction (RAMI) Extra-Label Use (ELU) Gn 02 Mar 2018 an approximately 2.5-year-old with Reliminate Schnaeze was succinated with Nobbacs 4Phy, Robinez Let and Nobbac T simultaneously (all in one syringe, ELU). The dog originated from Agentina and was brought to Germany approx 1.5 to 2 years ago, but possessed no vaccination card, therefore previous vaccinations / vaccines used are unknown. No previous drug-related reactions were reported to the vet. After the vaccines were injected the dog was put down from the vet's table and a few moments later it shortly squesked and was lying in lateral recumbency. The vet helped the dog up, but there was weak to no muscle forms. While standingthe dog womited 1 limes (no unusual substances or foreign material was seen in the vomit), thereafter was put back on the table and bost consciousness. Mucous membranes were procellam with, heart almost not heraardig, bearbaing a first was very quick them slowed down and was shallow. Pupillary reflex was existent all the time. It was not possible to place a venous catheter (or but bod per sexuely, so the dog received subcanceous fluids (SeriorIudini) and Predivisione-acetate, and a heat pad. After approx 15 minutes the dog showed first signs of recovery and was stable after approx 1 bour of intensive textement, but still weak! It was sent home and received another fluid infusion on the next day (03 Marl), then completely recovered. No more information expected. Asse closed. Such hypersensithinky are well-known possible side effect of all vaccines. As all three products were administered concomitantly, it is not considered to the concomitantly, it is not possible to distinguish their respective effect. Therefore, the roles of EURICAN CHPPI2, PREUMODGO and NOBIVAC L4 are assessed: B (Possible).
	FR-ANMV-16 ANMV 00551	France	Animal	,,,,		04/03/2016	04/04/2016	1 1		04/03/2016	Not Known	Diarrhoea, Vomiting, Inappetence, Pr ostration, Apathy	Not Known	On 04/03/2016, a dog (pixtly succinated with NOBINAC L4. The same day (precise time to onset unknown as the owner has been absert after vaccination, if he animal was found way quasthect. It displayed prostration, womiting and diarrhose. The apathy and anorexis lasted some days before complete recovery. The vet reported that it is the first time that he noticed such reaction after having used this vaccine more than 100 times within the last 6 montls. Follow-up 4 apr 2016: case upgraded to serious. Duration of reaction: 2 weeks Reason for treatment: Vaccination Outcome of SAR: Paparable	Not Applicable	4.8	NOBIVAC L4 - N/A,N/A,N/A, N/A,1 dose; duration: once; (04/03/2016- N/A) BR> 	A - Probable	CA comments: The clinical signs are consistent with a post-vaccinal reaction, and there is plausible time association. Vomiting and diarrhoea may have multiple cause, but the animal was in good health before vaccination. Similar cases are already reported with this product. Therefore, the role of NOBIVAC L4 is assessed A forobabile!
NOBIVAC L4	FR-ANMV-16 ANMV 00698	France	Animal	Canine/dog	Not Known	01/04/2016	06/04/2016	1 1	0	01/04/2016	Not Known, Known, Known, SRX-GR> Not Known, Known, SRS-SR> Not Known	Oedema of the extremities (see also other SOC for most applicable oedema), Swollen face (see also 'Skin')	Not Known	01/04/2016: one hour after vaccination with NOBINAC CHPP), NOBINAC L4 (3rd injection of primary vaccination) and administration of Effizity TSL2, 8M/Q/20 Mb, the puppy displayed swollen face (eyes, cheeks, lap) and extremities. Teatment with methylprednisolone 15 mg MA and monitoring during 3 hours, then discharged. The next morning, the owner told the vet the swelling had disappeared. Duration of reaction: Few hours Reason for treatment: Primo vaccination Outcome of SAR: Favorabl	Coton de Tuléar	2.4	EFFITIX 28, MG/240 MG SOLUTION POUR SPOT-ON FOUR TRES-FEITS CHEENS-N/AN/AN/A, N/A, 1 dose; duration: once; onset time: 1 flour (0.1/04/2016-N/A), 8B7-8BR-ND8IVAC CHPPI-N/AN/AN/AN/A, 1 dose; duration: once; onset time: 1 flour (0.1/04/2016-N/A), 8B7-8BR-ND8IVAC L4PI-N/AN/AN/AN/A, 1 dose; duration: once; onset time: 1 flour (0.1/04/2016-N/A), 8B7-8BR-ND8IVAC L4-N/AN/AN/AN/A, 1 dose; duration: once; onset time: 1 flour (0.1/04/2016-N/A)	B - Possible	CA comments: Facial swelling and its short time to onset are compatible with an anaphylactic-type reaction. The oedema of the extremities is unusual for such reaction. Succines are well income possible causes of anaphylactic-type reactions, whereas figural is nor as sociated with local intolerance/allergy, which is not reported here. Therefore, the note of NGIUNC CIPPS, NGIUNC L4 are B (possible) assessed, and the role of EFRTIX 26,8 MG/240 MG is O1 (inconclusive) assessed
	FR-ANMV-16 ANMV 00735	France	Animal	Canine/dog	10 Year(s)	09/04/2016	12/04/2016	1 1	0	10/04/2016	Not Known	Injection site swelling	Not Known	On 09(94/2016, a dog (Argenthian Mastiff) vaccinated with NOBIVAC L4. The day after, the animal displayed a large swelling (around 30 cm) at the neck. Rectal temperature : 39°C Recovery on 12/04/2016 Reason for treatment: Vaccination	Dogo Argentino	49.3	NOBIVAC L4 - N/A,N/A,N/A, N/A,1 m; duration: once; onset time: <= 24 Hours (90/d/2016- N/A) 	A - Probable	CA comments: The nature and location of the sign and the time to onset are compatible with a reaction to the vaccine. Transient oedema at injection site is a well-known side effect of NOBIVAC L4, documented in the SPC. In this case the large size of the swelling is a bit unexpected but could be linked with a particular sensitivity of the dog. The role of NOBIVAC L4 is assessed: A (probable)
NOBIVAC L4	FR-ANMV-16 ANMV 00774	France	Animal	Canine/dog	Not Known	13/04/2016	19/04/2016	2 1	0	13/04/2016		Bradycardia, Pale mucous membrane, Dyspnoea, Malaise, Anap hylactic shock	Not Known	On 13 April 2016, a female pregnant dog was vaccinated with EURICAN CHPP2 and NOBINAC L4. Ther 30 minutes later the dog experienced malaise, dypnes, severe bradycardia, garylysh mucous membranes and anaphylactic shock. Such reaction was treated with fluid therapy and injection (IV) of Solumedroi AD. The AE lasted for 2 hours. No more information available. Reason for treatment: Annual vaccination	n, Miniature Poodle	Not Known	EURICAN CHPPI2-L - N/A,N/A,N/A, N/A,1 dose; duration: once; onset time: 30 minutes (13/04/2016- N/A)-BRBR-NOBIVAC L4 - N/A,N/A,N/A, N/A,1 dose; duration: once; onset time: 30 minutes (13/04/2016-N/A) >BR>	B - Possible	CA comments: Signs described, time to onset, therapy provided are fully compatible with the vaccination. Case among other likely other ones. At the two products were administered simultaneously, it is not possible to straight identify their respective role: thus EURICAN CHPP2L and NOBIVAC L4 are both assessed B (possible).
	FR-ANMV-16 ANMV 00910	France	Animal	Canine/dog	8 Year(s)	17/12/2015	15/05/2016	1 1	o	18/12/2015	Not Known, >BR >BR >BR Not Known	Injection site sarcoma, injection site mass	Not Known	On 17/12/2015, a fog (§ y- o French Bulliogi vaccinated with NOBIVAC L4 and CANICEN CIPP. One day later the animal englosphed tump between the shoulder at injection size. On 900/12/015, at the timp of booster vaccination with NOBIVAC L4, the lump was still present. Despite treatment with PREVICO) the lump size increase up to 12 cm on 27/02/02/05. Surgical removal. Histologic analysis revealed myworlde sarcome (grade III) On 15/05/2016, the cicatrization is still ongoing.	French Bulldog e K,	3 19.5	CANICEN CHEPT - NA,AN,AN,AN,AN,AN,AN,AN,AN,AN,AN,AN,AN,A	O - Unclassifiable/unassessa ble	CA comments: Injection site associated Phocosaroms is well described in cits, and has been reported with vaccines and various injectable frangs fee Jong acting parriods]. This condition has also been described in dops, albeit rarely ("Tibrosarcoms at presumed sites of injection in dogs, characteristics and ecomparison with non-vaccinations site fibrosarcoms and feline obst-vaccinal fibrosarcoms." Journal of Veterinary Medicine Series A. 2003;50(6) 286-291, in the present case, time to oner flow months after fibr injections) is short but compatible for induction of a tumoural process in comparison with fibrosarcoms in cast (3 months to 10 years). No similar case reported with these products. Chem the available data, no clear conclusion can be drawn. Therefore the role of both product is assessed () (Inclassified)
	FR-ANMV-16 ANMV 01299	France	Animal	Canine/dog		04/07/2016	11/07/2016	1 1	0	07/07/2016	Not Known, BR>BR Not Known, >BR > Not Known	Emesis (multiple)	Not Known	07/07/2016: 3 hours after administration of DOLPAC 10, the dog started vomiting (flood first, then blible) He womited a found 7 times during the evening. On the next day at noon no symptoms anymore during consultation, and no anomaly during examination (thus, no conglementary examination was considered today). The veterinarian prescribed a phytothereby ryugo and antiackios, Note : The owners noticed no lethargy or fatigue in the days following the vaccination with NOBIVAC CHP and NOBIVAC 14 which occurred on 04/07/2016.	Crossbred	6	DOIDRA CID - NI/ANI/ANI/A NI/AL tablet - evening duration: once; onset time: Within 3 Hours (D7/07/2016 - NI/ANI/ANI/AL NI/A)RBN-BRN-BORIVAC CHP - NI/ANI/ANI/ANI/AL dose; duration: once; onset time: 4 Days (04/07/2016-NI/ANI/AL NI/ANI/ANI/ANI/AL dose; duration: once; onset time: 4 Days (04/07/2016-NI/ANI/AL Once; onset time: 4 Days (04/07/2016-NI/ANI/AL Once; onset time: 4 Days (04/07/2016-NI/ANI/AL ONCE; onset time: 4 Days (04/07/2016-NI/ANI)	N - Unlikely	CA comments: The reported signs and chronology are compatible with a role of ORUPAE, D. and poorly compatible with a role of DRI-PAE, D. and poorly compatible with a role of the succines. therefore, beyond reasonable dout, the role of ORUPAE OID IA (probable) assessed, and the roles of MOBIVAC CIP and NOBIVAC L4 are N (unlikely) assessed.
NOBIVAC L4	FR-ANMV-16 ANMV 01382	France	Animal	Canine/dog	12 Year(s)	05/07/2016	22/07/2016	1 1	0	12/07/2016	Not Known,
 Not Known</br 	Injection site abscess,Injection site mass	Not Known	12/07/2016: one week after uscination with NOBINGL II and EURICAN CHPPI2 [ligicated separate), not mixed in the same syringe], the dog developped an inortant inflammatory mass at injection site, which quickly evolved into a large abscess, necessitating a surgical procedure and oral antibiotherapy. The vet thinks NOBINAC L4 is responsible for this reaction, since "L4 vaccines have the reputation to cause important inflammatory reactions".	Other Canine/dog	8.5	EURICAN CHPPI2 - N/A,N/A,N/A N/A,1 dose; duration: once; onset time: 1 week (05/07/2016- N/A)cBR>-BR>NOBIVAC L4 - N/A,N/A,N/A, N/A,1 dose; duration: once; onset time: 1 Week (05/07/2016-N/A)cBR>-BR>	B - Possible	CA comments: Vaccination may cause local inflammation which may evolve towards abscess, either septic absecess in case of contamination during injection, or sterile abscess mainly due to adjuvants. As the vaccines were injected simultaneously in the same area, each one is B (possible) assessed.
NOBIVAC L4	FR-ANIMV-16 ANIMV 01506	France	Animal	Canine/dog	3 Month(s)	11/08/2016	11/08/2016	1 1	0	11/08/2016	Not Known, SR> Not Known, >BR > >KBR>	Facial oedema, Anaphylactic type reaction	Not Known	On 11.082/2016, a puppy (3 m- o Boston Terrier) was succinated with NOBIVAC L4, NOBIVAC CHPP an NOBIVAC KE, Dan Injections of primovaccination, the first injection was made with versican Plus Phypip/L4 a month ago). About 1 hour later, the animal displayed a facial oedema probably due to an anaphylactic-type reaction, Treatment with corticoids.	d Boston Terrier	3.4	NOBIVAC CHPP1 - N/A,N/A,N/A ,N/A,duration: once; ornest time: 1 h [11/08/2016 ,N/A)=BB>=BR-NOBIVAC KC - N/A,N/A,N/A,N/A,N/A,M/A,N/A,M/A,N/A,M/A,N/A,M/A,N/A,M/A,N/A,M/A,N/A,M/A,N/A,M/A,N/A,M/A,N/A,M/A,N/A,M/A,M/A,M/A,M/A,M/A,M/A,M/A,M/A,M/A,M	B - Possible	CA comments: Clinical signs are consistent with type: hyperesultably reaction to the vaccine, and there is reasonable time association. Such reactions are commonly reported with various succine. To our knowledge, hyperentialityly reaction has been very rarely reported with intransal vaccine (between used alone). However, as a sail three products were administered concentrality, it is not possible to distinguish their respective effect. Therefore, the role of NOBIVAC CERPS. NOBIVAC L4 and NOBIVAC Kc is assessed: B (Possible).

NOBIVAC L4	FR-ANMV-16 ANMV 01550	France	Animal	Canine/dog	3 Month(s)	11/03/2016	29/08/2010	5 1	1 0	11/03/2016	Not Known, BR >BR>BR>BR> Not Known	Diarrhoea, Apathy	Not Known	11/03/2016: vaccination with NOBIVAC L4 and NOBIVAC CHPPI. Clinical pattern are consistent with hypersensithity reaction feven no observed angloedems or unitorain frequently associated with systemic signs). Previous vaccinations may have sensitized the animal. Given strong time association, there is no valid afferrate cause; role of each vaccine remains difficult to evaluate. Each is 8-possible classified.

NOBIVAC L4	FR-ANMV-17 CPVL 01629	France	Animal	Canine/dog	4 Month(s)	18/11/2017	11/12/2017	7 1	1	0	21/11/2017	R> Yes,	Crying Decreased appetite, Hind limb atxial pecreased activity/cricing - Heawtorial disorder (see also Neurological disorders)	No Data	DO: Cavaller King Charles Spaniel dog vaccinated with EURICAN DAPPI LYOPHILISAT ET SOLVANT POU SUSPENSON INIECTABLE, associated with RABISIN and NOBIVAC L4. Note: third injection of primary course (previously with vaccines from warous other brands). Dit it dipalayed hillim bataxia, with circling. At wet examination, dog also trying to catch absent Phying objects (as if flies around ears), Owner also observed a decreased applicite, animal less active and often crying. 22 (thou days before wet phonecall): still same troubles, but increasing. No nystagmous or anisocoria at wet examination. Neurological earn in propiders. No olists, no observable gain, but dog doesn't want to be touched anymore. Duration of reaction: c or = 30 days Duration of reaction (precision): ongoing (3 weeks) Reason for treatment: vaccination Investigations: Distemper Outcome of SAR: Unknown	R Cavaller King / Charles Spaniel	3.3	EURICAN DAPPI LYOPHILISAT ET SOLVANT POUR SUSPENSION INICTABLE - NA/NA/NA/NA/NA/A N/A1 dose; duration: once; onset time: 2-3 days (1811/12018—18-8-BR-NGBINAC L4 - (1811/12018—18-8-BR-NGBINAC L4 - (1811/12018—18)-(1888—18-8-BR-RABISIN - N/AN/NA/NA/NA/NA/NA/A1 dose; duration: once; onset time: 2-3 days (1811/12017—N/NA/BR-S-BR-RABISIN - N/AN/NA/NA/NA/A1 dose; duration: once; onset time: 2-3 days (1811/12017—N/NA/BR-S-BR-S-BR-S-BR-S-BR-S-BR-S-BR-S-BR-S	O1 - Inconclusive	CA comments: Clinical pattern described by vet is poorly specific but signs of sudden activity, circling, stiffness seemed to evoke a diffuse paintly undrown, potentially compatible with the hypothesis of acute canine polyradiculometris (ACP). This has been reported in dogs 1 or 2 weeks after vaccination. This condition is similar to Guillain-Barer Sydrome (GIS) observed in humans. Aetiology of this syndrome is not clear, currently considered as a immune conflict resulting of multiple factors. In humans, trigger can be a recent vaccination (less than 6 weeks) or vial or bacterial infection. In this case, time to onset is much shorter than commonly reported, Later distemper infection could also be considered, but no mention of occular, cutarents or reprintancy signs, Relationship with vaccines is poorly likely, but data are not sufficient for inclusion in the Nursible's Lesproy (no result of investigation about distemper, necessors). EVESCAM PLUS DaMPI, MASIN and NOBIVAC L4 all remain O-unclassified.
	FR-ANMV-18 ANMV 00120	France	Animal	Canine/dog		03/01/2018	13/01/2018	8 1	1	0	08/01/2018	Not Known, BR >BR>BR>BR>BR> Not Known	Hyperthermia, Hot spot (pyotraumatic dermatitis)	Not Known	A Female bernese mountain dog (5-year-old, weighing 47 kgl was vaccinated SC between the soulders with NOBINAC CHP9I and NOBINAC Lin on 30/01/2015. Five days later the birth displayed hyperthermi [33.8°C] and hot spot at the leighct on and of the vaccines. The owners (lappet the birth and consulte the veterinarian. Treatment with one melonicam injection, artibiotics jamoxicilin + clavulanic acid) and PREDNIDERM (cutcome is orgoing. Note: the veterinarian specifies that the birth had previously developed hot spots. Duration of reaction: 5 days Reason for treatment: vaccination	d		NOBIVAC CHPPI - N/A,N/A,N/A N/A,1 dose; duration: once; onset time: 5 days (30/1/2018- N/A) -SBR>NOBIVAC L4 - N/A,N/A,N/A,N/A,1 dose; duration: once; onset time: 5 days (03/01/2018-N/A) -SBR>	B - Possible	CA comments: Time to onset and nature of the signs reported (hyperthermia), but sool are very exocable of a post-vaccional reaction that may occur after any vaccines. Furthermore hot spots have already been observed in this doy, Since 2 vaccines were injected simultaneously, it is not possible to determine the exact role of leach of them. Therefore, the role of NOBING CHPP and NOBINGC L4 are assessed B- nossible.

												protrusion,Abnormal stool colouration,Abnormal necropsy finding		and 2014-UK-04473. Puppes were vaccinated with Nobiasc DIPF and Nobiasc L4 on 3 Oct 2014 (8 weeks of age) and his puppy was given as second vaccine was given on 13 No 2014 (14 weeks of age and seeks after primary vaccine-extra label use). At this time the puppy had positive losopora results confirmed by IDRSC. It was treated with Potentiated sulformands: Unknown exact date of diagnosis. Bitch was only vacinated as a puppy and no boosters since. Bitch was ill at parturition and was not presented to the VER. 2pppy was housed enalsed until 5 weeks of age and then were boused in a hen house with frequent rats seen. A pupples in total 2014-UK-04575 [Penn], 2014-UK-04579[Pen] and 2014-UK-04570 [umin) have been presented with details. Puppy was reported as being unwell on 25 Nov 2014-UK-04573 [Venn] of the puppy was reported as being unwell on 25 Nov 2014-UK-04573 [Venn] of the vaccine					
														inection 25 Nov 2014 vomiting and yellow diarrhoea. Jaurdice. Puppy was euthanased on 25 Nov 2014 and sent for post morters. Dorst morters showed that the puppy had generalized icterus, pulmonary oedema and patchy congestion and intestinal parasitism. Changes are consistent with Leptospirosa infection. Clarification of 1 ab letting—F3H filturorescent in situ hybridization test) letting on histology samples looking for the presence of live bacteria in fairly high numbers—only clusters of bacteria were present. PCR target Lipi32 gene used to type the bacteria present in the histology samples (eact samples used were not disclosed). All pupples have Leptospira Solgentersenii servery Harddig- Sou's Positive on PCR. Nothing further expected Updated batch number. Follow-up on 02 Feb 2018: VeODNA code "death by euthansa" has been added:
