Insufficient information to exclude product involvement.
NOBIVAC L4	UK-VMO-1989/17	United Kingdom	Animal	Canine/dog	12.02 Year(s)	27/02/2017	26/04/2017	1 1	0 27/02/20	7 Not Known	Injection site lump,Injection site warmth,Injection site pain	Not Known	Vaccine for Legiot a administered to my dog. Vaccine size felf warm very shortly after. Lump began to come up the next fely. I hought it might go down but continued to increase in six owe next few days and was uncomfortable when touched. I saw vet who confirmed it was a reaction to vaccine though he would need to do a needle aspiration taking cells to prove it. A decision was made to see if I could administer afternative treatment at home to irradiate it but if not gone in one week and inflammatory drugs would need to be given and cells sent to lab. With the use of coid compresses and Alore Vera and Arrica gel alternatively the reaction resolved. I have absolutely no doubt whatsoever that the Lepto 4 vaccine caused this problem. My vet has suggested going back to Lepto 2 next time. Reaction duration 2 weeks. No more information expected. Gene Nobixe CNP Both humber A095400 and Lepto 6 battch number A095401 and Nobixec KyCough batch number A075701 Owner feels it was the kyCough vaccine which caused the reaction. When dog left surgery it was fine and had been given a clean bill of health. Agrous Lif hat convent contacted surgery to say her yes semender sowhelm and during conversation her face then seemed sowhelm. Owner brought dog down for re-examination. Owner states dog fad only gone home and eaten her tea with other dogs and couldn't have been exposed to anything in the garden etc which may have caused the problem. Exam of dog showed acute swelling of conjunctive and surrounding States and along the upone pile ine, breasting notiop, stachycards, parinte, mmb - pilk, but difficult to examine due to inflammation, crt 2-sec, temp 33.1 teratment - dexamethasone 0.2mg/kg & Hulls, fee washed with odd water - within 30mins breathing back to normal temp reduced, pulse normal and inflammation reduced. Outcome unknown.	Shih Tzu	5.5	Nobiac DIP - 1,N/A,N/A, 10,1 ml 1 Aminal (30,703,704). N/A,-8R>-Nobiac KC - 4,N/A/A, 1,0,0,4 ml 1 Animal (30,703,704). All 1,0 ml 1 Animal (30,703,704). ANIM-BR-SR-Nobiac LS supersion for Injection for Dog 1,N/A/M, 1,0 ml 2 Animal (03,708,704). All 1 Animal (03,708,701).	B - Possible	Temporal association is strong an according to the SPC a hypersensitivity (anaphylaxis) reaction may occur after vaccination with L4. However, the symptom are more ilikely to be related to Nobhac the properties of the properties of the 10th and other factors cannot be discarded as the dog went home and had some food after vaccination.

NOBIVAC L4	UK-VMD-3697/17	United Kingdom	Animal	Canine/dog	4 Year(s)	13/07/2017	17/07/2017	1 1	0 14/07/20	17 Not Known,
 <br Not Known</br </br 	Anorexia,Haemorrhagic diarrhoea	Not Known	Vaccination was given on 13/07/2017 at 10.40 am. by the next morning developed haemorrhagic distribose and was also anorexic. Dog has been on HIP's xif Purins HA for 4-5 morths suspected adverse flood reaction-both dermatological and gastrointerlast signs-intermittent vomiting, anorexis and distribose. No further episodes since 13/06/2017. Reaction duration 12 hours. I have ticked that dog has not previously received similar meth however been regularly vaccinated with Vanguard DHPPIL2 but this was a first time the dog received Nobivac DHPPL4	Whippet	22.7	Nobivac DHP - 1,N/A,N/A N/A,standard one vial (13/07/2017- N/A)-BB->BS-Nobivac L4 suspension for Injection for Dogs- 1,N/A,N/A,N/A,N/A (13/07/2017- N/A)-BB->-BR>	- Possible	Temporal association is very strong and signs may occur a part of a hypersensitivity reaction however dog had been on Hirs' 3F Jernar Haf Or 4-5 months suspected adverse food reaction (intermittent vomiting, anorexia and diarthora). Do gropted to have been find during the month before vaccination. Some presexting condition may have contributed to the signs, however, product involvement is possible. Two vaccines administed concurrently.

	UK-VMD-5665/17	United Kingdom	Animal		1.33 Year(s)		13/10/2017	1 1	1 22/09/2	Known, Known, SR> Not Known	stroke,Uncomfortable,Pyrexia,Deal it,Panting	Not Known t	Following vaccination on 18/09/17 with Nobiwa ct J and Nobiwac DHP, the 1.3 year old, male Chow Chow dog developed a number of signs from 22/09/17. The reporter states that the grant by him being restless and not sleeping, just wandering around our flat. It then progressed to him looking uncomfortable, so I took him outside as I thought he may have an upset stomach and diarnhose. He did seem constipated. When we came back home he started panting heavily and throwing up. He didn't want to led flown and just stood in first of his first Lihen took him to our energency vet, who realised he had a fewer of 4.25 and diagnosed him as having heat stroke. I was baffed as it had not been hot outside that day and we very carefully monitored the temperature indoors (especially as he was a Chow). They then tried to cool him down, took blood tests which were inconclusive and he passed away a few hours steer. It later realized the only thing unusual that had happened earlier in the week was his vaccines. After doing some research, it seems that this vaccine has caused many other does to oas a work.
